

STI-N118

- pulse rate / period meter
- rotational / linear speed control
- revolution / movement period control
- 0 or 2 relay (or OC) outputs
- power supply output 24V DC
- RS-485 / Modbus RTU

STI-N118 ratemeters in tight, wall mounted case (IP 65), are designed to control rotational speed (from 1,5 to 50000 rev/min) or its inversion (revolution period). Available parameters of divider and multiplier enable flexible scaling of measure and transformation into linear speed. On top of that, they enable operation in the frequency and period meter mode, what allows to show e.g. material linear speed, baking time, drying time, revolution period. The ratemeters may have 2 relay (or OC) outputs, programmable depending on the instantaneous rotational speed / period.

- password protection,
- "over" signalling when the measuring range is exceeded,
- setting the rotational speed units,
- settable delay time of control outputs: up to 99 sec. or min.,
- settable maximum waiting time for the next rotation,
- threshold hysteresis setting,
- ACCESS option - easy threshold modification,
- versions available with AC and DC power supply.

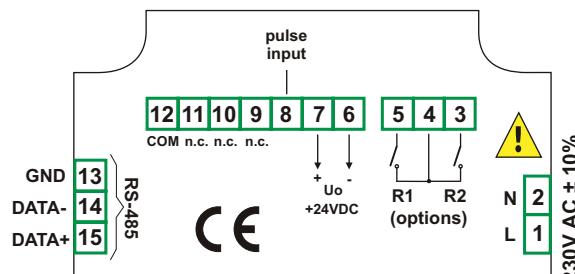

Typical applications

1. Measuring the rotational speed of crankshaft.
2. Measuring of baking time in continuous oven.
3. Measuring the speed of the material being wound, featuring alarm signalling and drive system control.
