AWP 821 series draw wire sensors; consists of a rotary potentiometer which is controlled by stainless steel wire. They make measurement by pulling and rewinding stainless steel wire. They convert linear motion to potentiometric output.

The “A” series gives of 4-20 mA analog output with the help of the converter card.

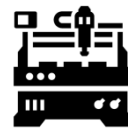

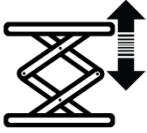

The “V” series gives of 0-10 VDC analog output with the help of the converter card.

The “C” series gives of CANopen signal output with the help of the converter card.

Optionally, redundant output, different cable length or connector model can be requested.

MOUNTING AND WARNINGS

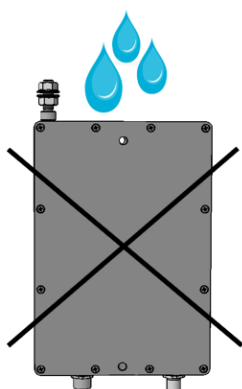

1. Never release the wire after pulling. Otherwise, the coil spring will be damaged.

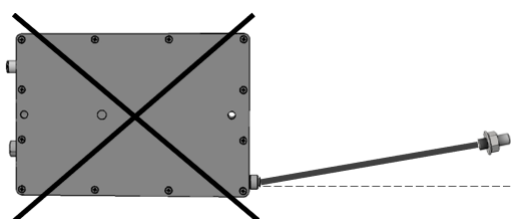

2. Mount the sensor according to the mounting directions shown below.

3. If there is a trickle of water (like a rain), the wire outlet must not be a drip of water upstream. If needed please use guide rollers.

4. The wire should not be pulled in angular. If needed, please use guide rollers.

Important Note(!): Failure to comply with these recommendations, the malfunctions that may occur will not be under the warranty.
